

Practice: 612 - Tree/Shrub Establishment**Scenario: #1 - Individual tree, hand planting****Scenario Description:**

Tree seedlings will be hand planted in the forested area where few or no forest trees are growing, the existing stand of trees needs underplanting, or the previously planted seedling tree stocking level is below desirable conditions. Wildlife habitat is degraded by loss of forest conditions. The resource concerns addressed are degraded plant condition: inadequate structure and composition, and inadequate wildlife & fish habitat.

Before Situation:

The stocking level of the forest does not meet the minimum recommended number of trees per acre. The existing condition of the forest stand does not meet the landowner's objectives. To be a viable forest, additional seedlings need planting. Wildlife habitat is rated poor.

After Situation:

The prescribed number of trees are hand planted on 20 acres and the objectives of the landowner are met. The forest will provide wildlife habitat, long term ground cover, and capture atmospheric carbon.

Practice: 612 - Tree/Shrub Establishment**Scenario: #2 - Individual tree, hand planting with browse protection****Scenario Description:**

Tree seedlings will be hand planted in the forested area where few or no forest trees are growing, the existing stand of trees needs underplanting, or the previously planted seedling tree stocking level is below desirable conditions. Seedlings are protected from wildlife browsing. Wildlife habitat is degraded by loss of forest conditions. The resource concerns addressed include degraded plant condition: inadequate structure and composition and inadequate wildlife & fish habitat.

Before Situation:

The stocking level does not meet the minimum recommended number of trees per acre and does not meet the landowner's objectives. To be a viable forest, additional seedlings need planting. Wildlife habitat is rated poor. Wildlife are known to browse tree seedlings in the area causing great damage.

After Situation:

The prescribed number of trees are hand planted, and the objectives of the landowner are met. Seedlings are protected from wildlife browsing by installing some type of protective device. A forest will provide wildlife habitat, long term ground cover, and capture atmospheric carbon.

Practice: 612 - Tree/Shrub Establishment**Scenario: #3 - Trees, machine planted with tubes for animal protection****Scenario Description:**

This practice involves planting tree seedlings after the site has been prepared for seedling growth and establishment. The productivity of the site is good and will handle a medium density planting rate. Typical scenario will consist of 1000 feet of trees with tubes for animal protection. The resource concerns addressed are degraded plant condition: undesirable plant productivity and health, inadequate structure and composition, and degraded wildlife habitat. Terrain is moderately sloping and will be planted with a mechanical tree planter. Smaller size seedlings (1-0) are planted.

Before Situation:

The land has little or no tree cover, or is stocked with the wrong tree species. Competing vegetation is a concern before and after planting. Soil condition is degraded due to the loss of the native forest ecosystem (organic matter in topsoil depleted). Native wildlife habitat is lacking. The main resource concern is degraded plant condition: inadequate structure and composition.

After Situation:

Land is established with permanent tree cover that will improve degraded plant condition, reduce soil erosion, establish wildlife habitat, sequester carbon and reduce invasive species presence. Establishing forest vegetation also creates corridors for wildlife movement. Planted trees have vexar tubes, or something similar, installed as protection from animal damage.

Soil condition is degraded due to the loss of the native forest ecosystem (organic matter in topsoil depleted). Native wildlife habitat is lacking. The main resource concern is degraded plant condition: inadequate structure and composition. The area generally includes arid or drought conditions that greatly reduce the success of tree survival.

After Situation:

Land is established with permanent tree cover that will improve degraded plant condition, reduce soil erosion, establish wildlife habitat, sequester carbon and reduce invasive species presence. Establishing forest vegetation also creates corridors for wildlife movement. Planted trees have vexar tubes, or something similar, installed as protection from animal damage. Practice: 612 - Tree/Shrub Establishment**Scenario: #7 - Hardwood Planting, 1 gallon pots****Scenario Description:**

Hardwood seedlings (potted) to be planted to reestablish an upland hardwood forest. Planting will be by hand. The resource setting is an area that historically was an upland hardwood forest. Resource concerns are degraded plant condition: undesirable productivity and health, inadequate structure and composition, and inadequate habitat for fish and wildlife.

Before Situation:

The native forest has been removed and the land is either cropped, grazed, hayed or brushy forest. If any upland trees exist, they are of poor quality or are undesirable species. Terrain is gently to moderately sloping with sheet and rill soil erosion occurring.

After Situation:

The area of treatment is 10 acres. Potted/containerized hardwood seedlings are planted by hand. Post vegetation control should be evaluated and conducted if necessary.

Practice: 612 - Tree/Shrub Establishment**Scenario: #8 - Hardwood Establishment, direct seeding****Scenario Description:**

Native seeds (acorns, nuts, etc) from native tree species are directly planted in the soil. The direct seeding is done with a broadcast seeder so the seeding rates have been increased. Site preparation is completed (disking to eliminate competing vegetation). The native seeds are collected/purchased locally to ensure trees are known to be adapted to local conditions. Resource concerns are degraded plant condition, and inadequate habitat for fish and wildlife.

Before Situation:

The hardwood forest is degrading. High value species, lumber and wildlife habitat are not regenerating due to changes in the natural disturbance regime or past harvesting. Unwanted shade tolerant tree species have regenerated and are in the overstory competing with desirable species as well as in the mid and understory where they will eventually out-compete desirable species.

After Situation:

Seeds from native species are collected or purchased and planted at prescribed rates. Site preparation is done prior to direct seeding. Degraded plant condition and wildlife habitat are on an upward trend.

Practice: 612 - Tree/Shrub Establishment**Scenario: #9 - Shrub Planting****Scenario Description:**

Shrubs are planted to provide a more diverse habitat. Plantings are in either uplands or bottomlands. The site lacks ground level habitat structure and diversity for wildlife. Resource concern is inadequate habitat for fish and wildlife - habitat fragmentation.

Before Situation:

No shrubby vegetation, or very little, is present in the forest understory. Wildlife species that need shrub cover are not present. An adequate stand of overstory trees is present, but it is a single level, versus the desired multi-level structure.

After Situation:

A 10 acre area is planted with shrubs. Shrubs are not planted over the entire 10 acres. They are planted in groups or motts. The motts, roughly circular in shape, are 50 feet in diameter, with 50 shrubs planted within each mott. 4 motts are planted per acre, for a total of 200 shrubs per acre. Motts are randomly established to take advantage of site conditions and shrub species being planted.
